

What is claimed is:

- 1 1. A card holding structure comprising:  
2 a card insertion port provided in a battery holding concave  
3 portion of an internal housing;  
4 a slope which is provided near said card insertion port  
5 to guide the insertion of a card into said internal housing;  
6 and  
7 a card connector for holding said card.
- 1 2. The card holding structure according to claim 1, wherein  
2 said internal housing is provided with a holding rib for inserting  
3 said card to a predetermined position.
- 1 3. The card holding structure according to claim 1 or 2, wherein  
2 said slope is also used as a stopper.
- 1 4. The card holding structure according to any one of claims  
2 1 to 3, wherein said internal housing which covers said card  
3 connector has an opening.
- 1 5. The card holding structure according to claim 4, wherein  
2 said opening is located near said card in said internal housing.
- 1 6. A card holding structure comprising a card connector which  
2 is provided on a circuit board to hold a card, and means for  
3 pressing said card against said card connector in an internal  
4 housing.

1 7. A card holding structure that slides and mounts a card on  
2 a SIM card connector fixed on a board in a portable terminal,  
3 wherein

4 a front part of said card is held by a card holding portion  
5 provided at a front part in the card sliding direction of said  
6 SIM card connector; and

7 a slope that is also used as a stopper, said slope being  
8 formed by a rectangular elastic piece one end of which is fixed  
9 to a housing, is provided.
